

HP - #564 - #920 INK CARTRIDGE RESET PROCEDURE

After installing your cartridge, you'll notice the printer still thinks they're empty, despite having just been refilled. This is due to a computer chip installed on the cartridge which remembers that it has been used. This will not prevent you from printing, but you will get a few friendly reminders from the printer that you are using "empty" or refilled cartridges. Simply acknowledge these prompts when they arise by pressing the "OK" on your printer.
